

## GSM gateway Migration and Overflow Call Traffic

The best CPS voice rates available in the UK bar none  
UK Mobile **5.99p**  
UK Local and National at **0.75p**  
Existing L2MC Clients only

### L2MC (CPS) Carrier Pre Select

As an existing L2MC GSM gateway client, you are already experiencing cheaper costs for calls to mobiles. However, in certain cases you will not be receiving maximum cost benefits from this technology:

1. In multi site scenarios where not all traffic breaks out centrally over the GSM gateway. Remote sites are still paying normal PSTN rates.
2. If the number of minutes scoped on the GSM gateway is exceeded regularly and excess minutes route over the PSTN.
3. If the VOIP network is in the process of being rolled out gradually. In this instance sites without VOIP or with insufficient QOS will still be routing their F2M (fixed to mobile) calls over the PSTN at normal prices.

### What is Carrier Pre-Select?

The use of carrier pre selection network access technology removes the need to install any hardware. With pre selection, traffic originating from your site will be routed directly onto our network with no need for prefix codes. The 'selection' of UK-Telco as your preferred provider is done automatically at the point of entry (the local BT exchange) to the public voice network.

### Why L2MC CPS?

L2MC however, has not only secured the best rates currently available, but you are not compromising on quality. All of our calls route over BT lines, as opposed to some alternative networks offering lesser call quality.

### Why bother if we already have a GSM gateway?

Each overflow or non migrated mobile minute is costing you more than it should. If for example you have 100,000 excess PSTN minutes at 7.5p, by switching it across it will immediately save your organisation £18,120 annually, with 200,000 saving £36k and 500,000 a whopping £90k. Can you afford not to!!
